

Beam Splitters

Compact, rugged and highly efficient opto-mechanical unit for splitting fiber-coupled radiation

FEATURES

Fiber-Coupled Beam Splitters

- Configuration 1 → 2 and 2 → 2
- Highly efficient coupling into singlemode or polarization-maintaining fiber cables
- Compact, rugged, transportable and sealed opto-mechanical units
- Fully fiber-coupled
- Very high long-term stability, efficiency and reproducibility

DESCRIPTION

These fiber-coupled Beam Splitters are compact opto-mechanical units that split a fiber-coupled source into two output fiber cables with high efficiency.

Fiber Couplers

A fundamental component of a fiber-coupled Beam Splitter is the [Laser Beam Coupler](#), which is the input into the opto-mechanical unit collimating the input radiation and, finally, couples the radiation back into the polarization-maintaining fiber cables. The stability of the total Beam Splitter is determined by the [stability](#) of the laser beam coupler.
